 SEANA

SEANA TEXTIL

Workwear solutions

Since our creation in 1994, we at Seana Textil have become one of the leading import and export companies in the workwear industry in Spain.

We focus on business excellence, with the aim of maintaining the satisfaction of an excellent service at a competitive price for our customers.

Our experience means that we can easily adapt to the needs of every professional sector. This means that our design team can create personalised collections which are specially adapted to the specific requirements of the client.

“ Constant innovation drives us to offer the best solution to our customers’ need. ”

Albert Valls –CEO

SEANA TEXTIL

Integral solutions

More than 600 items in permanent stock.

3300 m² of offices and clothing workshops.

6500 m² warehouse.

Deliveries in 24/48 h.

STRETCH

SEANA TEXTIL

Products

We offer a complete range of workwear, with more than 600 garment items in stock, plus 20 colors, different compositions, gmmages and homologations.

With a wide range of sizes, from XS (34) to 5XL (68) and with all the personalization possibilities. From basic garments to technical and safety clothing, according to CE regulations.

SEANA TEXTIL

High visibility

We base all of our collections on the concept of functionality, comfort, and resistance.

In our High Visibility range, there are two additional characteristics: the fabric's suitability for outdoor use in all kinds of weather and the vitality of its eye-catching colour withstands washing to ensure that it continues to be an effective safety alert.

-
1. High visibility yellow, orange and red fluorine colors with reflective strips.
 2. Different color combinations.
 3. Resistance to washing without losing the vividness.

TIANA 2 REC Fleece

TRIP Trousers

Global Recycled Standard

We believe that every decision counts when it comes to protecting the planet. That's why we develop garments made from recycled polyester fibres, giving materials a new lease of life.

Our commitment to sustainability is backed by certifications such as the Global Recycled Standard (GRS), which guarantees the recycled origin of the fabrics.

In addition, the STANDARD 100 by OEKO-TEX® label ensures that every garment is safe for people and kind to the environment.

We are committed to responsible workwear, without compromising on quality, durability and comfort.

Because working well also means working consciously.

DRIM 2 Trousers

High visibility monocolour

High visibility garments in fluorescent yellow and fluorescent orange, designed to ensure optimum visibility in high-risk work environments. Their single-colour design offers a clean, uniform look, without compromising on the comfort, durability and functionality required for everyday use. Ideal for outdoor work and low-visibility conditions.

PR HIGH VISIBILITY

High visibility bicolour

High visibility garments in fluorescent yellow, orange and red, combined with dark colours for a more modern and functional design. This combination improves visibility in hazardous environments while providing gater wear resistance in the most exposed areas. Designed to offer safety, comfort and durability for everyday work.

HIGH VISIBILITY

Fluorescent orange bicolor

Particularly suitable for industrial and public road environments, it performs exceptionally well in areas with vegetation and heavy machinery.

Fluorescent yellow bicolor

It offers maximum visibility in most environments, particularly in low-light conditions and urban areas.

PREMIUM BAMBOO SERIES

Its soft fabric moves comfortably with you, causing no irritation or allergic reactions.

Bamboo naturally blocks up to 98% of UV rays. It will help keep your skin protected and prevent sunburn.

It is also biodegradable and 100% eco-friendly.

SEANA TEXTIL

The company

Since its foundation in 1994, Seana Textil is a reference company in the workwear industry in Spain.

We make and import a wide range of quality garments, also with a permanent stock and logistics services for deliveries in 24 / 48h.

1. Design team.
2. Personalised collections.
3. Show-room.
4. Stock automatization.
5. Logistic processes.

Personalised design

Thanks to the design team at Seana Textil, we can create personalised and exclusive designs for each of our clients at very competitive prices.

We develop the prototypes using the patterns that are best suited to the needs of each client in order to obtain excellent results.

STANDARDS

Weather protection clothing.

EN ISO 343:2019

Standard EN 343 applies to materials and seams of clothing to protect against weather conditions in the possible combination of rain, mist, snow, and soil humidity.

Standard EN343 includes two levels, both with values from 1-3, with gater efficiency indicated by a higher number of both values:

- ▶ **Resistance to water vapour:** the standard stipulates the tests to measure how well the fabric repels water vapour, which represents the resistance to perspiration evaporation from the surface of the skin. The higher the evaporative resistance, the lower the breathability. This value is used to Classify the PPE into one of three Classes, which go from 1 to 3 (least to most breathable).
- ▶ **Resistance to water penetration:** the standard stipulates the water pressure that the exterior material and seams are subjected to, obtaining the resistance to water penetration, subsequently using this value to Classify the PPE into one of three Classes, which go from 1 to 3 (least to most resistant).

EN ISO 343

X Resistance to water penetration

Y Resistance to water vapour

Protection clothing against non-extreme cold environments.

EN 14058:2017+A1:2023

This standard specifies the requirements and test methods for the performance of simple garments, for the protection of the body against cold environments, it does not include specific requirements for head coverings, footwear or protective gloves to avoid local cooling. It is intended for protection against the cold at temperatures, according to thermal sensation, higher than -5°C.

Protective clothing certified based on the EN 14058:2017 standard can be used both indoors, where environmental conditions are known and can be controlled, and outdoors, where wind speed and precipitation occur uncontrollably.

If used indoors where there is no high air velocity or potential precipitation, protection against air permeability or water ingress is not required. When working outdoors in the rain or when there is, in general, the possibility of coming into contact with water, it is advisable to use garments whose seams and most superficial layers are resistant to the penetration of water, since the absorbed moisture remains in the Fabrics, they lose their insulating capacity.

To obtain EN 14058 it is mandatory to pass the Thermal Resistance (Rct) requirement. The rest is optional.

X Thermal resistance Class (Rct m2k/W). (Required)

X Air permeability (AP)

X Resistance to water penetration. rct

X Resistance to water vapor. Ret

X Thermal insulation.

EN 14058

X
X
X
X

STANDARDS

Heat-proof and flame-resistant protective clothing.

EN ISO 11612:2015

All clothing designed and manufactured in accordance with the UNE-EN ISO 11612 standard is Category II, except the garments designed and manufactured for use in hot environments with effects comparable to those in an ambient temperature of 100° C or higher, which will be Category III, with or without infrared radiation, flames or large projectiles of fused materials.

The protective clothing that meets this European standard is designed to protect workers from brief contact with flames and at least one type of heat. This heat can be convective, conductive or radiant heat, molten metal splashes, or a combination of them.

All garments that comply with the EN ISO 11612:2008 standard must be marked with codes to indicate behaviour in the presence of flames (A1 and/or A2) and at least one additional code to indicate the type of heat (B, C, D, E, or F) followed by a number which indicates the level of benefit reached.

EN ISO 11612

ABCDEF

- Code A: Limited flame spread**
- Code B: Convective heat resistant**
- Code C: Radiant heat resistant**
- Code D: Molten aluminium splashes resistant**
- Code E: Molten iron splashes resistant**
- Code F: Contact heat resistant**

Protective clothing. Electrostatic properties.

EN ISO 1149-5: 2018

This European standard specifies electrostatic requirements and testing methods for protective garments that dissipate static electricity that can cause a fire. The demands are not sufficient for oxygen-enriched flammable atmospheres. This European standard is not applicable for protection against electric stress.

EN ISO 1149-05

Protective clothing used during welding and related processes.

EN ISO 11611: 2015

This standard establishes the minimum essential safety requirements and testing methods for protective clothing that must be worn during soldering and related processes with comparable risks.

This type of protective clothing is intended to protect the user against splashes (small droplets of molten metal), short-term contact with flames, radiant heat from the arc, and it minimises the possibility of brief electric shock from accidental contact with electric current of voltages of up to approximately 100 V d.c. in normal welding conditions.

EN ISO 11611

- CLASS 1 (APC1):** protection against welding techniques and less dangerous situations which cause lower instances of splashes and radiant heat.
- CLASS 2 (APC2):** protection against welding techniques and more dangerous situations which cause more instances of splashes and radiant heat.

Protective clothing against electric arc thermal risks.

EN ISO 61482-2: 2020

The protective clothing which meets this standard is designed to protect workers exposed to the risks of an electric arc. The garments protect the worker from the different injuries that can be caused by exposure to this type of risk.

EN 61482-2

This standard has two types of Classes:

- APC1: Arc Test 4kA / 0.5s**
- APC2: Arc Test 7kA / 0.5s**

STANDARDS

Protective clothing against chemical liquids.

EN ISO 13034 2005+A1

EN ISO 13034 2005+A1:2009

This standard specifies the minimum limited performance for chemical protection apparel for limited or reusable use. Chemical protection clothes with limited performance are suitable for use in cases of potential exposure to light sprays, liquid aerosols or low-pressure, low-volume splashes, which do not need a barrier which is completely impermeable to liquids (at the molecular level). This standard covers both chemical protection suits (Type 6) and partial body protectors (Type PB [6]).

For chemical protection clothing, it is not only the material used which plays a pivotal role; the design is also an important factor for protection. This affects the impenetrability of the outfit (the resistance to chemical products) in their different states (dust, liquid, and gases) through seams and joins. The different Classifications that this European standard covers are based on this impenetrability.

Suit type:

Standard:

1 A:	Against gases and vapour. Hermetic	UNE EN 943-1 :2003
1 B:	Against gases and vapour. Hermetic	
1 C:	Against gases and vapour. Hermetic and against positive pressure	
2:	Against gases and vapour. Not hermetic and against positive pressure	
3:	Against jets of liquids	UNE EN 14605 :2005
4:	Against pulverized liquids	UNE EN 14605 :2005
5:	Against solid particles in suspension	UNE EN 13982-1 :2005
6:	Against splashes	UNE EN 13034 :2005
PB (4):	Partial protection of body. Type 4 material	UNE EN 14605 :2005
PB (6):	Partial protection of body. Type 6 material	UNE EN 14605 :2005

Suit	Complete suit test	Material test
1 A	Impenetrable (internal pressure according to UNE EN 464)	Resistant to chemical product permeation (UNE EN ISO 6529 or UNE EN 374-3)
1 B	Impenetrable (internal pressure according to UNE EN 464)	
1 C	Impenetrable (internal pressure according to UNE EN 464)	
2	Drains inward (annex to UNE EN 943-1:2003)	
3	Resistant to penetration by jet of liquid (UNE EN ISO 17491-3)	-
4	Resistant to penetration by pulverized liquids (UNE EN ISO 17491-4)	
5	Inward drain of solid particle aerosols (UNE EN ISO 13982-2)	
6	Resistant to penetration by light pulverization of liquids (test UNE EN ISO 17491-4 modified)	Repels and resists penetration by liquids (UNE EN 6530)
PB (4)	-	Permeation of chemical products
PB (6)	-	Repels and penetration of liquids

CORPORATE SOCIAL RESPONSIBILITY

At Seana Textil, we view Corporate Social Responsibility as a genuine, comprehensive commitment that guides all our decisions. We believe that providing high-quality workwear involves not only meeting our customers' professional needs, but also acting in an ethical, responsible and respectful manner towards people and the environment.

Our management system is **certified to ISO 9001:2015**, which guarantees the quality of our processes, continuous improvement and a constant focus on customer satisfaction. This international standard reflects our commitment to excellence, efficiency and reliability at every stage of development, production and service.

In terms of sustainability and the circular economy, we are committed to the responsible use of resources through garments made from recycled materials. This commitment is supported by **Global Recycled Standard (GRS)** certification, which verifies the recycled content of products and guarantees the traceability of materials throughout the entire production chain. The GRS standard also ensures compliance with strict environmental, social and chemical criteria, actively contributing to the reduction of environmental impact and more responsible textile production.

People's safety and well-being are also a top priority. That is why our garments are certified to the **STANDARD 100 by OEKO-TEX®** standard, which guarantees that the fabrics have been tested and are free from harmful substances, ensuring products that are safe for both the end user and the environment.

Through these certifications, we reaffirm our commitment to responsible workwear that combines sustainability, quality, durability and comfort. Because working well also means doing so consciously, respecting the present and contributing to a more sustainable future.

Key commitments

Certified Quality

Processes that are monitored and focused on continuous improvement in accordance with the ISO 9001:2015 standard.

Responsible use of resources

Use of recycled fibres, which helps to reduce the consumption of virgin raw materials.

Traceability and transparency

Verification of the origin and recycled content of materials through Global Recycled Standard (GRS) certification.

Respect for people and the environment

Safe garments, free from harmful substances and certified by STANDARD 100 by OEKO-TEX®.

Social and ethical commitment

A focus on responsible practices throughout the entire value chain.

Durability and comfort

Garments designed for demanding professional use, extending their lifespan and reducing their environmental impact.

B2B digital sales channel

Easier.

Faster.

Faster.

Through the B2B digital sales channel, you can send us all your orders, for any of the references in our extensive catalog of workwear, in an agile and simple way, as well as consult your previous orders, delivery notes and invoices.

Send us your orders more quickly and efficiently

Access.

Request your access data to info@seanatextil.com
We will send you the necessary information to start using the B2B digital sales channel.

Ordering.

You just have to choose within the SEANA product catalog, which contains the same references as your paper catalog. The platform will register your order and we will begin to work on its preparation in a more agile and faster way.

Payments.

The B2B sales platform is a tool to streamline your orders and does not include online payment. SEANA will issue the invoice corresponding to your order with the usual expiration date.
